<i>Vermentino</i>	766.1
<i>Viognier</i>	642.1, 1042.1, 1051.1
<i>Xinomavro</i>	18.1

Herrick Grapevines obtained licenses with the French authority of viticulture ENTAV-INRA® in 1998. This partnership has helped supply the American wine and vineyard industry with some of the most advanced and special varieties and clones of winegrapes in the world.

ENTAV-INRA® has a selection process that carefully tests each potential clone for sanitation, viticultural suitability, and wine quality before certifying it for release. The varieties and clones have come to the United States through Foundation Plant Services located at U.C. Davis and current selections have gone through the Protocol 2010 certification program.

A more complete history of ENTAV and its selection process is available on the ENTAV-INRA® website and VITIBOOK.
